Chapter 3: Radiological-Cytological Correlation

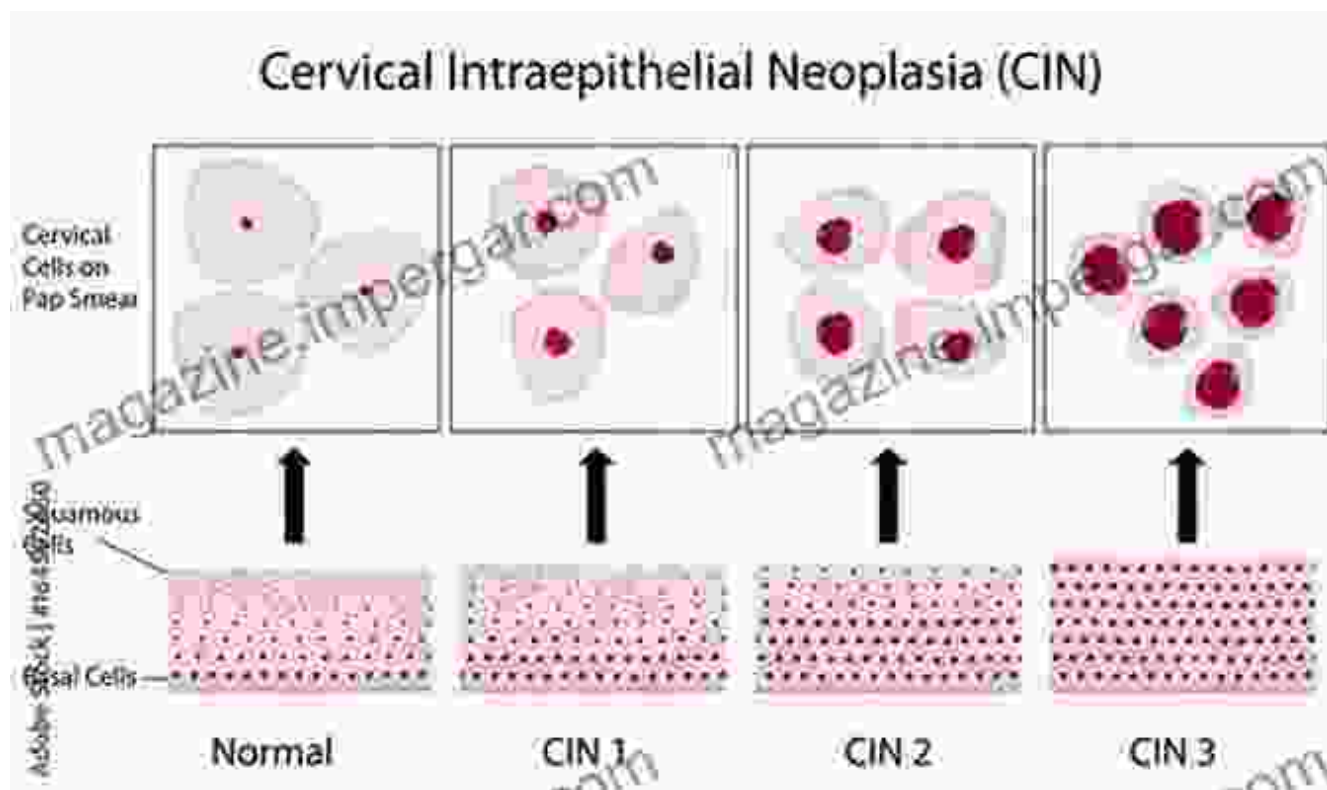

This chapter highlights the importance of integrating radiological and cytological findings for comprehensive patient care. It explores the role of imaging modalities, such as ultrasound, computed tomography (CT), and magnetic resonance imaging (MRI), in guiding cytological procedures and enhancing diagnostic accuracy.

Chapter 4: Cytological Patterns in Disease

Chapter 4 presents an extensive overview of the cytological patterns associated with various disease processes, including neoplastic and non-neoplastic conditions. It covers a wide range of cytological features, such as nuclear atypia, cytoplasmic changes, and cellular arrangement,

providing clinicians with the knowledge necessary to identify and interpret abnormal cytological findings.
