In the traditional view of research, the subject is seen as a potential source of bias and error. Researchers are therefore urged to adopt an objective stance, free from their own personal experiences and beliefs. However, in recent years, there has been a growing recognition that the subject point of view is not necessarily a hindrance to objectivity, but rather a necessary condition for it.

The Subject Point of View argues that the subject's perspective is essential for understanding the world around us. This is because our experiences and beliefs shape the way we perceive and interpret the world. Without taking into account the subject's point of view, we can only get a partial and distorted understanding of reality.

The book draws on a wide range of disciplines, including psychology, sociology, and philosophy, to support its argument. It shows that the subject point of view is not simply a matter of personal opinion, but rather a complex and multifaceted phenomenon that has a profound impact on our understanding of the world.

The Subject Point of View has important implications for research. It challenges the traditional view that researchers should strive to be objective and free from their own personal experiences and beliefs. Instead, the book argues that researchers should embrace their own subjectivity and use it as a resource for understanding the world around them.

The Subject Point of View is a groundbreaking book that has the potential to change the way we think about research. It is a must-read for anyone interested in the nature of subjectivity, objectivity, and the pursuit of knowledge.
